## Clinical Case with Terrasil's Wound Healing Technology

BEFORE (Day 1)

AFTER (Day 7)

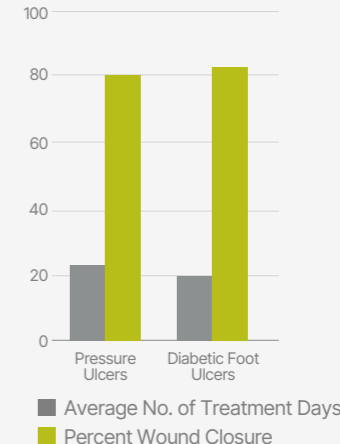

**Description:** Wagner 1 Diabetic Foot Ulcer of 9 months duration; treated with daily application of Terrasil Ointment.

**Background:** Located on left plantar foot, wound initially measure 0.2x 0.2 x 0.1cm. Previous treatments included silver alginate dressing and offloading.

**Results:** 100% closure in 1 week.

**Concurrent therapy:** Dry dressing and offloading

## Clinical Study Showed 83% Wound Closure in 23 Days

- A retrospective multi-site case series at four US hospital wound care centers
- 30 adult patients with chronic, non-healing wounds (persisting for an average of 6 months prior to study inclusion)
- Terrasil Ointment\* was added to basic standard of care

**Results:**

**83% Wound closure in 23 days for wounds that were non-healing for average 6 months**
